DETAILED ACTION

Notice to Applicant (s)

1. This action is responsive to the following communications: amendment A filed on 9/26/03.
2. This application has been reconsidered. Claims 1-5, 11-23, 25-32, 38-53, 55-65 and 67 are pending.

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Art Unit: 2622

3. Claims 1-5, 11-23, 25-32, 38-53, 55-65 and 67 are rejected under 35 U.S.C. 102(e) as being anticipated by Szeliski et al. (Szeliski) (US 6,097,854).

Szeliski teaches a mosaic image construction system wherein all the claimed circuitry is either explicitly or inherently taught as evidenced by the fact that the mosaic image construction system utilizes a method that divides each image into a number of patches, and uses the patch centers as prospective "feature" points. The mosaic image construction system further calculates and minimizes the distance between the image characteristics and utilizes normalization factors to prevent the motion estimates from overshooting their correctiveness. Therefore the occurrence of patterns and textures not intended are prevented and high quality mosaic images are generated. (please note: col 21, line 31 – col 30, line 59).
